

## Universal Telescopic Injection Probes (UTIPS-15-25-30)

Unlike Juniper brand or any other manufacturer brand, GTG Universal Telescopic Injection Probes are capable of being adjusted to any length to fit any specific turbine engine installed on an aircraft.

The delivery hose on the injection unit can be coupled to a Y connection and then the Y connection coupled to both Universal Telescopic Injection Probes (J Hooks). The probes are entered from the back of the bypass duct and then held tight against the core case in front of the 1<sup>st</sup> stage stators ahead of the 2<sup>nd</sup> stage compressors.

This ensures 100% water/detergent injection into the engine core.

UTIPS (Universal Telescopic Injection Probes) eliminate the opening of the cowlings and thrust reversers and reduce the time spent for a complete engine wash.

### **Included**

- 1- Universal Telescopic Injection Probes (J Shaped Probes) (Standard)
- 2- Y Hose Connection (Standard)
- 3- Instruction Sheet (Standard)
